COMMENTS TO AUTHORS

Please clarify/explain these points: 1) Kikuchi, in his paper, mentioned an earlier hypothesis of Morooka that the difference might also be due to the duration of dermal melanocyte production 2) PPV is due to "twin-spotting", which involves mosaicism and allelic mutation, one for pigmented lesions and one for vascular lesions with some crossing over during mitotic recombination".

COMMENTS TO AUTHORS

The manuscript is well structured and adequately up-to-date. Therefore, I think that it is worthy of publication with some very minor corrections (listed below) concerning language. Page 1, line 15: remove "the" and "an". Page 1, line 16: remove "the" before "White" and before "Hispanics". Page 1, line 17: remove "the" before "Asians". Replace "hypothesized" with "observed". Page 1, line 24: replace "more" with "longer". Page 2, line 1: add a comma after "crest". Page 3, line 14: remove the quotation marks after "recombination". Page 4, line 10: add "always" after "as". Page 4, line 12: replace "size" with "diameter".
