SPECIFIC COMMENTS TO AUTHORS

The authors report a case of ovarian cellular fibroma with estrogenic activity. The case report is original and well described. I have only a major comment. Why did the authors not consider including inhibin B in the laboratory tests? They should also discuss this shortcoming considering what has recently been reported by EV et al, Benign ovarian thecoma with markedly elevated serum inhibin B levels mimicking adult granulosa cell tumor. *Gynecologic Oncology Reports* 34 (2020) 100658.
