SPECIFIC COMMENTS TO AUTHORS

Pressure injury is a serious threat to patients' life and health. It increases their medical burden, and can lead to infections and other adverse events. Cerebral infarction is a clinically prominent cerebrovascular disease, and patients need to be bedridden for long periods of time. In this interesting study, the authors explored the value of nursing services based on a multidisciplinary collaborative treatment team in patients with pressure injury wounds following cerebral infarction. The study is very interesting, and the results are reasonable. Comments: 1. A minor language editing is required. Some minor language polishing should be corrected. 2. The manuscript seems to be a case control study, not a retrospective study, please check and revise. 3. The limit of the study should also be discussed.

SPECIFIC COMMENTS TO AUTHORS

In this study, the authors included sixty-two patients with pressure injury wounds from cerebral infarction. The inclusion and exclusion criteria are clearly described. The results are very well displayed. The reviewer suggests to accept this manuscript after a minor editing. Thank you.
