### **SPECIFIC COMMENTS TO AUTHORS**

Very nice paper, well structured and concisely organized even it is just a narrative review. Probably a systematic one would have put much more value on the data described. Even if it is not an original study the value of data remains high. In my opinion, some more details about abdominal wall compliance, abdominal wall perfusion pressure would have been welcome and added value to the manuscript. Also the section on treatment should have included at least some notions about the open abdomen and here I refer to the indications, the stages of treatment and its local and systemic consequences. You have to correct your English language and here it is a lot to improve. refer the manuscript to a native speaker or to a medical english language translator. Also, please correct your references in brackets because they are not unitary (eg systems and main organs.[7], normal IAP (1.2% and 7.1%, respectively).9 ). Also please correct thus the grammatical point to be after the brackets; references in the brackets are not correct ( .[9.10.11.12.13.14.15.16] )and should be [9-16]. Please correct the format because too many words are without space between.
