SPECIFIC COMMENTS TO AUTHORS

I have the following quesries 1. Please specify the location of the tumour properly. Was it in the upper part, lower part or hilum. While the contrast-enhanced computed tomography examination revealed that the mass had grown to 9 cm in maximum diameter, and was wrapped around the right hilum , the renal CT angiography revealed that the middle and lower branches of the right renal artery were involved in the mass. In the images, it seems in the upper part and hilum. 2. Remaining tumour was aspirated with aspirator. Please elaborate. Is it safe and sufficient? Is there a chance of recurrence?

SPECIFIC COMMENTS TO AUTHORS

Congratulations to the authors on this interesting case report. The authors reported a successful robot-assisted partial nephrectomy for giant renal hilum angiomyolipoma through the retroperitoneal approach. Overall, the study is well-written. However, the images are of poor quality. I would suggest a video vignette of the surgery instead of pictures.
