SPECIFIC COMMENTS TO AUTHORS

This is a case report of Sebaceous Carcinoma. In this manuscript, the clinical and pathological features and treatment progress of sebaceous carcinoma are fully described. Although, there is no better treatment currently, it is possible that early and accurate diagnosis and removal of the lesion could benefit these patients. I think that's the value of this article.

SPECIFIC COMMENTS TO AUTHORS

Well written manuscript. It is not clear what prompted the imaging for the chest and brain- i suggest if there were symptoms the metastases produced, then they should be desribed.
