SPECIFIC COMMENTS TO AUTHORS

This report clearly shows that using different techniques, especially CBCT, can increase the success rate of Endodontic treatment with complex conditions. The manuscript is clear and well-written. I think that this manuscript can be published in the World Journal of Clinical Cases.

SPECIFIC COMMENTS TO AUTHORS

For me, this is a good article; however, I would like to comment on what you said in your conclusion "In conclusion, a thorough understanding of tooth and root canal morphology by CBCT during preoperative assessment is highly important": For me you have to add "in complicated cases", otherwise you are not respecting the ALARA regulatory guidelines.
