In introduction, it is common view that LNG-IUS is used for hypermenorrhea and dysmenorrhea. The author can delete some sentences. However, barium sulfate, which is a coating agent for LNG-IUS, does not always provide a high echo image. Did it have reference? How about pelvic examination? The discussion should focus the uterine cavity not complications. The myoma 3 was not showed in hysteroscope in Fig 2.

SPECIFIC COMMENTS TO AUTHORS

This is a worthy report of complications related to uterine perforation caused by LNG-IUS, which provides a certain reference for the diagnosis and treatment of the thread to be removed when the patient with LNG-IUS cannot be detected.
