SPECIFIC COMMENTS TO AUTHORS

This report present an 83-year-old male patient with liver abscess and colonic GHT. The prevalence rate is rare. For the conclusion, it is inappropriate to attribute the etiology of liver abscess to GHT. It is no valid evidence to be present in this report. The colonic GHT may be not associated with the pyogenic liver abscess. 1. Suggest using a timline to describe present history (clinical symptoms change), and discribe temperature numerically. 2. Suggest adding some laboratory examinations related to GHT, such as FOBT. 3. Suggest adding details of Endoscopic findings (for reference), and supplement more information CT image (such as shape), and adding the outcome of colon GHT at follow-up. 4. Suggest placing result of blood cultures put into Laboratory examinations to support the diagnosis of pyogenic liver abscess.

SPECIFIC COMMENTS TO AUTHORS

Interesting case report. Some comments: In the discussion: have you considered the possibility of altered gut microbiota due to gastric heterotopia in order to possible explain its association with pyogenic liver abscess? Please review the spelling of "Introduction" In the introduction please review the following sentence: "we report a case in which gastric heterotopic mucosa in colon was found was after a diagnosis of pyogenic liver abscess". The word was is duplicated.

SPECIFIC COMMENTS TO AUTHORS

This case is interesting and valuable. However, the English needs to be imporved. The clinical significance of this case needs to be clarified in detail and clearly.
