#### **SPECIFIC COMMENTS TO AUTHORS**

The authors show the case of clear cell tumor occurred after the surgery. The case is interesting, however I have some concerns. 1. What is the novelty of the current study?  
2. Please make introduction more enrich.

#### **SPECIFIC COMMENTS TO AUTHORS**

Very interesting and rare case. The authors should show the abnormal findings (intestinal thickening, tumor, lymph node metastasis) in the abdomen CT (Figure 2) using arrows, to make easier to localize them by the readers. The same comment is applicable to other figures with radiological studies. Please use arrows to indicate the described lesions. Why the patient did not receive any therapy after surgical intervention? Did the patient have any CT study after operation before 12 months when the patient started complaining again? Did the patient receive any chemotherapy during follow-up?
