PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 75658

Title: Two smoking-related lesions in the same pulmonary lobe: A case report of

squamous cell carcinoma and pulmonary Langerhans cell histiocytosis

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 06260153 Position: Peer Reviewer Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: China

Author's Country/Territory: Turkey

Manuscript submission date: 2022-02-28

Reviewer chosen by: AI Technique

Reviewer accepted review: 2022-03-02 12:57

Reviewer performed review: 2022-03-02 15:57

Review time: 3 Hours

Scientific quality	[] Grade A: Excellent [] Grade B: Very good [Y] Grade C: Good [] Grade D: Fair [] Grade E: Do not publish
Language quality	[] Grade A: Priority publishing [Y] Grade B: Minor language polishing [] Grade C: A great deal of language polishing [] Grade D: Rejection
Conclusion	[] Accept (High priority) [Y] Accept (General priority) [] Minor revision [] Major revision [] Rejection
Re-review	[Y]Yes []No

SPECIFIC COMMENTS TO AUTHORS

The coexistent squamous cell carcinoma and PLCH, the same immunohistochemical analysis of BRAF V600E mutation suggest the possible association between PLCH and lung cancer. This manuscript is nicely structured and well written. While there are two questions needed to be answered: 1. The two different lesions(squamous cell carcinoma and PLCH) in the same lung lobe should be informed in the title. 2. Lines 139-141: The BRAF V600E expression was found in 28% of the patients with PLCH and in 35% of patients with extrapulmonary LCH (14). Make sure that these datas are from reference 14. 3. References should be updated to the most recent years.
