### SPECIFIC COMMENTS TO AUTHORS

Impressive multimodal imaging of lipemia retinalis. The authors have made an important contribution to the literature. This unique case will have excellent citation.

#### SPECIFIC COMMENTS TO AUTHORS

Dear authors, The case is quite interesting. I have a few suggestions as follows: 1) Please correct all your typos and grammar errors. 2) Diabetes - some more information is required about type of diabetes, any explanations how 26-year old woman developed DM and so on. Did you find any complications that could be obviously associated with DM? I am asking because of the relatively high glycosylated hemoglobin - DM is not entirely compensated. 3) The other endocrine disorders are not characterized. Did you check out it? I would generally conclude that this woman is quite not healthy in sense of some chronic diseases. You must demonstrate all the main points. 4) Lipid metabolism: did you assess lipoprotein(a)? Please provide the reader with a number for C-RP. 5) Lab markers: you have a follow-up and it means can potentially draw a figure or a table to demonstrate any changes. Please harmonize the content. 6) Figures: the techniques must be described. Please deliver in some details which equipment (manufacturer, some details, magnification, calibration, a number of the involved experts) exactly was used.
