SPECIFIC COMMENTS TO AUTHORS

Dear authors, thanks a lot for giving me the opportunity to review your manuscript. As I read, the case has been partly published in a Chinese Journal, but has now the focus on nursing. I don't know in what kind of Journal the case has been published but there is no doubt for me that I can review your manuscript in the direction of nursing. The title reflects the main subject/hypothesis of the manuscript. The abstract summarize and reflect the work described in the manuscript. The key words reflect the focus of the manuscript. The background of the topic is adequately described with a present status and significance of the case report. I can't see a method which has to be used in a study (i.e. intervention), but that's not poor, because you described a case. All data you use in the manuscript are clearly described and important to understand the case. There are no results in the meaning of results of an (interventional) study, but under Point 3 of the manuscript you described the key points of nursing, which I would resume as the results of the case. The key points are concisely, clearly and logically. Your remarks are relevant to clinical practice. The figures and tables are sufficient and in good quality and with appropriate legends. Biostatistics are not used. Citations are appropriate. I couldn't find self-citations of the authors. All in all the manuscript is well, concisely and coherently organized and presented. Style, language and grammar are accurate and appropriate. The authors did prepare the manuscript according to the appropriate research method of a case report. I was wondering, why there is no note for submitting the case in an ethical committee. I would recommend to get an answer to the editor in chief and to me why this submission has not been done. Best regards! Your reviewer
