This paper discussed a Randomized Controlled Trial on the Role of H2 receptor blocker Famotidine over the clinical recovery of COVID-19 patients and got the Famotidine treatment group demonstrated a comparatively better outcome in the survival and death rate. A rapid recovery time, less duration of ICU stay among the survivors, favorable improvement in the CT findings, and an earlier viral clearance was observed in the Famotidine treatment group. This paper is well written. I don't have any comments for this paper.
