SPECIFIC COMMENTS TO AUTHORS

I appreciate for giving me a chance to review your valuable manuscript. I have some comments to improve your research. Please check and reconsider those. Thank you. 1. Your manuscript includes modified history. You should check and remove all the modified history and make a complete manuscript. 2. Theme should include the specific situation of children, such as “just after surgery” or “after admitting PICU”. Moreover, you could add “the psychological needs of the parents” in the theme because you explained that in the methods part. 3. At the theme, investigation status looks vague. You would mention the questionnaire survey instead of it. 4. At the abstract, background part, the second sentence “This investigation and analysis provide nursing practice for clinical nurses” is too general, not specific for the parents of children with complicated congenital heart disease. You should write the subject-specific research importance in this part. 5. Tables 2,4 and 5 are too busy to understand. Please check and revise these tables and descriptions of the results. 6. Compare with the explanation of the results, you wrote too much discussion using many references. Please check and improve the discussion to follow your results.

SPECIFIC COMMENTS TO AUTHORS

It is a very interesting topic but a revision is needed before being published

SPECIFIC COMMENTS TO AUTHORS

Dear authors, I am very happy to have the opportunity of reviewing your manuscript. The topic is a real important one for parents as well as for children, because if parents are in good conditions and informed in a good way they can take better care of their children. So here are my opinions of your manuscript: The title reflects the main subject of your manuscript. The abstract summarize and reflect the work described in the manuscript, key words reflects the focus of the manuscript. The manuscript describes the background, present status and significance of the study, but I would recommend to describe the core of the problem more specifically in the meaning of more in detail. The manuscript describes the method of the study in an appropriate way. The research objectives are achieved by the experiments used in this study. The manuscript interprets the findings adequately and appropriately, highlighting the key points all in all concisely, clearly and logically. Findings and their applicability/relevance to the literature are stated in a clear manner. The discussion is accurate and discusses the paper's scientific significance and relevance to clinical practice sufficiently. Table 1-4 are sufficient, in a good quality and appropriately illustrative, but table 5 looks puzzling. I would recommend to show the results in table 5 in a more structured way. All tables are shown with legends. In total the manuscript meets the requirements of biostatistics. The manuscript meets the requirements of use of SI units. The manuscript cites appropriately the latest, important and authoritative references in the introduction and discussion sections. I couldn't find self-citations of the authors. The manuscript is well, concisely and coherently organized and presented. Style, language and grammar is accurate and appropriate. Authors have prepared their manuscripts according to Strobe Statement

(observational study). The study met the requirements of ethics. Best regards Your reviewer.
