SPECIFIC COMMENTS TO AUTHORS

Authors showed a case of SLE showing disseminated varicella zoster accompanying gastrointestinal manifestations and sever pneumonia. This case showed serious condition, but the treatment was successfully done. The situation is not so rare. The image of skin lesions should be shown. The findings of liver biopsy might be helpful for understanding of the pathophysiology.

SPECIFIC COMMENTS TO AUTHORS

Thank you for sharing such an important and excited case. The discussion and approach of the case was excellent. There are some points to be reviewed: * In "INTRODUCTION" section, the sentences needs a grammatical review to be more clarify "intestinal and mesenteric vasculitis in difficult to differentiate from stomach". * In "History of present illness" section, "The patient experienced a relapse of the above symptoms"; could we know the interval time between the first and relapsing symptoms. * In "History of present illness" section, "Laboratory test results were as follows: neutrophil cytoplasmic antibody, perinuclear anti-neutrophil cytoplasmic antibody (pANCA)+; "; please review this part of the sentence "neutrophil cytoplasmic antibody". * In "Physical examination" section, the body temperature was 39°C; could you please mention if the measurement of the temperature was done orally or axillary. * In "Imaging examinations" section, please edit the phrase (CT angiography instead of CTA). * In "Table 1", please review the box of the table "W-SCC: absolute lymphocyte count, Ccr: Creatinine". * In "DISCUSSION" section, this sentences "intestinal and mesenteric vasculitis commonly occurs in patients with digestive system involvement, primarily arterioles or venules and the jejunum and ileu" needs a grammatical review. * In "DISCUSSION" section, "Figure 1" is not attached to the manuscript file. Please add the figure at the end of word file. * I have preferred to add more figures to enrich this valuable paper (for example CT of the chest in the context of interstitial pneumonia....).
