#### **SPECIFIC COMMENTS TO AUTHORS**

The study presents the the impact of religious factors and faith communities in managing diabetes among patients during the COVID-19 pandemic. The mini review is interesting and adds to the knowledge. I have a few suggestions, figure 01 can be removed as it does not represent any added information, secondly the authors should define their search strategy in order to make this review comprehensive.

#### **SPECIFIC COMMENTS TO AUTHORS**

Dear Authors, it is very crucial issue. The authors describe that diabetics have a higher chance of getting COVID-19 and a higher chance of getting sick or dying from it. To this regard they can add the description reported by Ciarambino et al ( J Clin Med. 2021 Aug 23;10(16):3740. doi: 10.3390/jcm10163740) on the mortality in Covid-19 patients with diabetes and hypertension? However the authors describe the role of religious and women gender in the management of diabetes. Please can describe age and educational of women gender in this management? Ciarambino et al for example reported that older women and loss educational level can influence the satisfactory perception (DOI: 10.31491/APT.2021.06.058). Can be need indicate the role of age and educational level on this perception? Thank you
