SPECIFIC COMMENTS TO AUTHORS

Dear author, after reading your case report, my revision opinions are as follows: 1/ The Case reports mentions that the diagnosis of antiphospholipid syndrome (APS) requires the patient to meet at least one clinical criterion and one laboratory criterion. It is recommended that specific diagnostic criteria be provided there. 2/The diagnosis of APS must exclude the secondary thrombosis caused by autoimmune disease, tumor and infection. In this paper, LA was weakly positive 7 days after injury, and other laboratory tests showed no abnormalities. It is suggested to provide more evidence for the diagnosis of APS. 3/White blood cell count, $21.8 \times 10^3/\mu\text{L}$ (Normal range, 4.8 10.8); Neutrophil, 86.8 % (50 75) In order to clarify the diagnosis of APS, it was suggested to improve the examination, and pathology confirmed that the formation of thrombus was unrelated to the inflammation of vascular wall. 4/It is recommended that the authors provide the results of platelet examination.
