SPECIFIC COMMENTS TO AUTHORS

The facial retightening technique of placing high G' fillers to the base of the ligaments is based on the authors' previous work published in PMFA Journal. In this case report paper, the retightening effect is quantified by 3D facial imaging. Measurements obtained both prior to and after injection are characterized. Overall, this is a good paper. I recommend minor revisions before acceptance. 1. Case Presentation: point 1 in Figure 1 may indicate point 1 in Figure S1. 2. The authors claim that the measurement of the parameters is achieved by the 3D facial imaging system. Please describe the 3D facial imaging system in detail: For example, what components does it consist of? What is the principle of imaging? 3. The detailed procedure is described in Huang et al[4]. However, this statement does not seem intuitive. I recommend the author to draw a flowchart or schematic diagram to show the detailed procedure.

SPECIFIC COMMENTS TO AUTHORS

In this manuscript, the authors reported two cases of facial improvement using hyaluronic acid to demonstrate the therapeutic efficacy of the method. However, there're several issues which should be addressed. 1. From the perspective of case report, both cases were common cases. 2. In order to prove that the method is effective, the sample size is too low to prove that the method is effective.

SPECIFIC COMMENTS TO AUTHORS

Dear authors; It was my pleasure to collaborate in the publishing process of your interesting manuscript; I found a well structured manuscript, with a logical order during the developing process of the topic. I just would like to recomend you to write a brief paragraph regarding the posible effect of the age of the patiens in the observed results.
