### **SPECIFIC COMMENTS TO AUTHORS**

This is an interesting case for reporting. It is worth noting that, the discussion section is rich and well arranged, and the most parts of the manuscript has a good spelling, grammar and syntax. In addition, the majority of bibliographic citations are update. However, before it becomes publishable, it still requires some improvement. Here are my comments: 1.The background section has been duplicated from the first paragraph of the introduction, it is incomplete and does not cover all of your research ingredients, and also, the importance of your article is not prominent enough. In this section, you must create an explicit view of why you are directed to write this topic. 2.In the case summary section be specific on the patient, and what have done for this individual, not on what this case study reports and definition of scientific facts. At the last sentences of this section explain the current situation of your patient. 3.Add one more keyword in your abstract, and make sure you checked all of them on Medical Subject Headings (MeSH). 4.The constructs and concepts in the introduction section are poor-organized. Include more general and specific background in the manuscript, and use more cohesion and coherence in sentences. The aim of your study, which must come in the last sentences, been located in the middle. 5.In the introduction section, there are some sentences which been left without citation. Provide references for All the sentences which finished by dot, and make sure that the entire of manuscript follow this maxim. 6.in the final diagnosis section, you have written the initial diagnosis; substitute it with final diagnosis. Sincerely Navid Faraji

SPECIFIC COMMENTS TO AUTHORS

Thank you for the opportunity to review this work. -1 Title. Does the title reflect the main subject/hypothesis of the manuscript? Yes -2 Abstract. Does the abstract summarize and reflect the work described in the manuscript? Yes. However, please provide the full term of this abbreviation in the Core tip: "ASS," "PAH," and "CTD." -3 Key words. Do the key words reflect the focus of the manuscript? Yes -4 Background. Does the manuscript adequately describe the background, present status and significance of the study? Yes -5 Methods. Does the manuscript describe methods (e.g., experiments, data analysis, surveys, and clinical trials, etc.) in adequate detail? Not applicable. -6 Results. Are the research objectives achieved by the experiments used in this study? Yes -7 Discussion. Does the manuscript interpret the findings adequately and appropriately, highlighting the key points concisely, clearly and logically? Yes -8 Illustrations and tables. Are the figures, diagrams and tables sufficient, good quality and appropriately illustrative of the paper contents? Yes -9 Biostatistics. Not applicable. -10 Units. Does the manuscript meet the requirements of use of SI units? Yes -11 References. Does the manuscript cite appropriately the latest, important and authoritative references in the introduction and discussion sections? There was "[J]" after every journal title in the reference. For example, "De Stefano L, D'Onofrio B, Manzo A, et al. The Genetic, Environmental, and Immunopathological Complexity of Autoantibody-Negative Rheumatoid Arthritis[J]. Int J Mol Sci, 2021,22(22)." Please remove "[J]" in the reference. -12 Quality of manuscript organization and presentation. Is the manuscript well, concisely and coherently organized and presented? Yes -13 Research methods and reporting. The CARE checklist mentions the "strengths and

SPECIFIC COMMENTS TO AUTHORS

The authors describe an unusual case of PH secondary to Seronegative RA plus ASS. The case is well written and figures are legible too. Multiple Minor comments need to be addressed- 1.Please expand "IIM" in introduction section, Line 8. 2.Outcome/follow-up section, Line 3- "Cardiac ultrasonography revealed Mild PH"- Please define the source of classification of PH into mild, moderate & severe. Neither the recent ACC/AHA nor the ESC/ERS PH guidelines provide such a classification. 3.Outcome/follow-up section,Line 11- " Arpan can be relieved after regular " - the sentence doesn't make sense ..correct it! 4."The current treatment of PAH (Anritsu Tan Tablets 5 mg bid) was" - provide generic name of Anristu Tan tablet ! 5.Table 1- "Pulmonary artery pressure" - which one Mean or systolic or diastolic ? 6. Fig. 2 - Gradual widening of the pulmonary artery not appreciable in serial CT. Give Pulmonary Artery dimensions for better understanding. 7." Sparks et al. showed that depression, especially antidepressant use, is "- Any specific antidepressants use which is more prone to develop RA ? if yes add. 8."SNRA and depression" section can be trimmed. Not very relevant as the present case concerns regarding development of PH. 9.SNRA and ASS section, Line 4-"Radiotherapy erosion is occasionally found " - it should be "radiological erosions". 10. Why ws ASS diagnosed - mention which criteria - Solomon or Connor's? 11.Reference - 14 & 16 are duplicate 12.Reference - 17 & 19 are duplicate
