

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 78444

Title: Effect of medical care linkage-continuous management mode in patients with posterior circulation cerebral infarction undergoing endovascular interventional therapy

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 02524239

Position: Peer Reviewer

Academic degree: MD

Professional title: Professor

Reviewer's Country/Territory: Taiwan

Author's Country/Territory: China

Manuscript submission date: 2022-07-03

Reviewer chosen by: AI Technique

Reviewer accepted review: 2022-07-12 11:50

Reviewer performed review: 2022-07-26 00:22

Review time: 13 Days and 12 Hours

SPECIFIC COMMENTS TO AUTHORS

Posterior circulation cerebral infarction is dangerous, especially large-area infarction in important parts, such as the brain stem, which is often accompanied by high mortality or severe disability rates. Medical and nursing care are closely allied to provide continuity of health services for patients with posterior circulation cerebral infarction. In this study, the authors provided more abundant theoretical data for the innovation and deepening the development of the clinical continuity management model to provide better health services for patients with posterior circulation cerebral infarction undergoing endovascular intervention. The designed of the study is very well, and the methods are clearly described. The results are interesting and well discussed. A minor comments: 1. A minor editing is required. 2. Please list the limit of the study and make a short discussion. 3. References should be edited and updated.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of effect of medical care linkage-continuous management mode on endovascular interventional therapy for posterior circulation cerebral infarctions. The manuscript is very well written. After a minor editing, it can be accepted for publication.
