SPECIFIC COMMENTS TO AUTHORS

Dear authors, I had the opportunity to review your work, and I hope that my comments will help improve the quality and strengthen your manuscript. The manuscript is in need for language editing TITLE: interesting -The authors could divide the section of case report into clinical and radiological subheadings -did the authors start to fix the fracture proximally or distally?

SPECIFIC COMMENTS TO AUTHORS

Dear authors: Thank you for carrying out this research work, I would like to suggest some areas of improvement for your manuscript: - Firstly, in the introductory section you should talk about the incidence and prevalence of this type of injury. You make it clear that it is an unusual fracture, but you should give some figures. - Furthermore, in your conclusion you refer to the fact that in this type of case, it is essential to carry out immediate surgical intervention, but in your study, in the methods section you comment that the patient was operated on from the fourth day after the accident, please explain this fact. - After the surgical intervention, the patient was immobilised for how many days? did he undergo any specific physiotherapy treatment with the aim of recovering his mobility and muscle strength prior to the intervention? Describe in more detail the steps to be followed after the intervention until the new examination. - The bibliography provided is very scarce, you should deepen your bibliographic review on the subject. Best regards.
