SPECIFIC COMMENTS TO AUTHORS

Dear authors, thanks a lot for having the opportunity to review your manuscript. Here are my comments: The title reflects the main subject of the manuscript, the abstract summarizes and reflects the work described in the manuscript. There are no keywords declared in the manuscript. The manuscript adequately describes the background, present status and significance of the study. It is formed as a review of the current state of the art in clinical challenges of postsurgical diabetes admitted to the Intensive Care Unit. Experiments are not in the focus of the manuscript. The manuscript interprets the findings adequately and appropriately, highlighting the key points concisely, clearly and logically. The findings and their relevance to the literature are stated in a clear and definite manner. But there is no discussion of the topic and the conclusion is too short. The relevance to clinical practice is not really sufficiently, more aspects would give more benefit. Table 1 is too small for showing the landmark studies. Legend is ok. Obviously the manuscript cites appropriately the latest, important and authoritative references in the introduction and discussion sections. Self-cites could not be found. Overall the manuscript is good organized and presented, but I recommend to edit the crossover from one part to the next part of the manuscript, because sometimes it looks like a brick in the manuscript. Style, language and grammar is accurate and appropriate. Overall the manuscript is prepared as a Systematic review, but it would be a good way to bring the manuscript in a more conceptual way. Ethical approval is not necessary.
