SPECIFIC COMMENTS TO AUTHORS

This is a good case report with several suggestions as follows: 1. Please supplement the patient's creatine kinase, creatine kinase isoenzyme and myoglobin indexes, which are of great significance for diagnosis. 2. Figure 1 and Figure 9 are suggested to be removed to protect patient privacy

SPECIFIC COMMENTS TO AUTHORS

1. Is this CNF, the same as Ludwig's angina? If so pls add this and if not, still add how it is different. 2. The patients index infection site was lung or kidney? Cant be both. Potentially kidney? Generally <4cm abscesses dont need drain, aspiration is fine. 3. Mostly Klebsiella dont produce gas. SOmetimes it does! Sometimes there is polymicrobial sepsis and the micro lab may not grow every time all the organisms. Comment on this. 4. Immunosupporession? Uncontrolled DM? 5. Agree with learning lessons as narrated. 6. Too many numeric of lab results. Possible to reduce and omit and mention some as "normal" 7. The second picture after 6 months is not needed, readers will trust that pt recovered without residual disability. Is ok. Can omit it.
