SPECIFIC COMMENTS TO AUTHORS

Dear editors and authors of the manuscript! The text of the manuscript is written in a good scientific style, the position of the authors is well-reasoned. The presented clinical case reflects the complexity of making a tactical decision, but in the absence of contraindications, closed reduction of the dislocation of the femoral head is justified and safe. The relevance and discussion of the result correspond to the high level of professionalism of the authors. The title of the manuscript, the content of the abstract, keywords and figures fully reflect the content of this study. The only wish to the authors is to correct the text of the conclusion, taking into account the therapeutic result of their patient.

SPECIFIC COMMENTS TO AUTHORS

Kindly rephrase "In the interim, CT scans (Figure 3), showing an acetabular posterior wall fracture associated with a marginal impaction fracture and an intra-articular loose body, were performed in our trauma center to illustrate the fractures in detail for the development of the definitive surgical strategy." Kindly provide complete diagnosis with the details on the acetabular fractures as identified in the CT
