

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 79253

Title: Prognostic factors for disease-free survival in postoperative patients with hepatocellular carcinoma and construction of a nomogram model

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 02731847

Position: Editorial Board

Academic degree: MD, MSc

Professional title: Associate Professor, Staff Physician

Reviewer's Country/Territory: Brazil

Author's Country/Territory: China

Manuscript submission date: 2022-08-12

SPECIFIC COMMENTS TO AUTHORS

This is a very interesting paper on prognosticating HCC. It develops a model for analyzing post-hepatectomy disease free survival in its sample, which is rather small for the aim of this paper. These results are not widely appliable - in the West, hepatitis B is responsible for a small proportion of HCC cases. Language needs serious polishing: it is well written, but it does not read very well. I would suggest for the authors to discuss this limitation in the discussion section.

SPECIFIC COMMENTS TO AUTHORS

It's better to modify the draft with more content.. experimental details need to be elaborated for supporting the title.. figures are not clear. please check whether they have 300dpi....The manuscript needs improvement with respect to data collection..
