SPECIFIC COMMENTS TO AUTHORS

In this study, the relationship between serum Spondin-2 expression, tumor invasion and infiltration, and antitumor immune response in patients with cervical cancer are investigated. Total 92 patients with benign uterine lesions and 86 healthy individuals were included. The methods are clear and the research are well performed. Comments: 1. The manuscript requires an editing. 2. The figures are not in good quality. Please replace them with high quality images. 3. References should be edited. Doi and PMID IDs should be listed.

SPECIFIC COMMENTS TO AUTHORS

Spondin-2 is an extracellular matrix protein that participates in the innate and acquired immune responses. Currently, its expression is associated with the development and spread of several malignant tumors, including prostate cancer and lung adenocarcinoma. In this study, the authors examined the association between serum Spondin-2 expression and tumor invasion and the immune response of patients with cervical cancer to provide a theoretical basis for clinical practice. The study is overall well designed and the results are very interesting. The reviewer has no specific comments to the authors. Only a minor editing to the manuscript should be alert.
