SPECIFIC COMMENTS TO AUTHORS

The authors described a case of patients with RP representing edematous and enhancing ET on MRIs accompanying otitis media. There are several problems that need to be corrected. (1) What's your new findings of this case? What rules have you learned about diagnosing the disease? (2) Why did the patient's MRI show such characteristics? What is the mechanism behind it? (3) References are too old, please add some references of recent years.

SPECIFIC COMMENTS TO AUTHORS

The authors have presented a rare case of RP with comprehensive clinical and radiological characteristics. The manuscript is of high quality except for minor mistake. "Fluid correction " should be fluid collection. However, this case has limited clinical importance.
