SPECIFIC COMMENTS TO AUTHORS

Dear authors! Thanks a lot for your article which I have the pleasure to review. The topic you are looking for is one of the interesting and important topics in pain management at ICU's. The title of your article reflects the main subject of your manuscript. The abstract summarize and reflect the work described in the manuscript, the key words reflect the focus of the manuscript. The purpose of the article is clearly described. The manuscript describes adequately the background and significance of the sreview. In the same way the article describes the method (review) and the classification of procedural pain in the ICU. The manuscript interprets the findings adequately and appropriately, highlighting the key points concisely, clearly and logically. Literature is reviewd in a correct manner and without any claim. There is only a short but nevertheless an appropriate conclusion of the article. Figures 1 - 3 are sufficient, but in my opinion not really necessary for the article. Tables 1 - 4 are sufficient, in good quality and they appropriately illustrative of the paper in a good way. Legends of the tables are appropriate. The manuscript cite appropriately the latest, important and authoritative references in the introduction and discussion sections. In total the manuscript is well, concisely and coherently organized and presented. The style, language and grammar is ccurate and appropriate. The authors did prepare the manuscript according to the appropriate research methods and reporting. Ethical clearence is missing but is not necessary for that kind of literatur review. The manuscript meet the requirements of ethics in research.
