### **SPECIFIC COMMENTS TO AUTHORS**

Leukemia's prevalence has been increasing yearly, especially in middle-aged and elderly populations. Leukemia patients are prone to adverse reactions during chemotherapy, which is not conducive to the prognosis of patients. Leukemia easily relapses, causing a heavy burden to patients' families and society. Empathetic nursing with mindfulness cognitive therapy is a nursing model developed by three well-known cognitive psychologists. In this study, the authors analyzed the clinical data of leukemia patients undergoing long-term chemotherapy and explored the impact of empathic care with mindfulness cognitive therapy on cancer-related fatigue, hope level, and negative emotion in leukemia patients with long-term chemotherapy. The manuscript is well designed, and the methods are described in detail. The results are interesting, and well discussed. Some minor revisions are required. (1) There are some minor language polishing should be revised. (2) A short background should be added in to the abstract. (3) Please describe the limit of the study, and make a short discussion about it.

### **SPECIFIC COMMENTS TO AUTHORS**

This is an interesting study about the ENMCT in leukemia patients with long-term chemotherapy. The manuscript is very well written. A minor editing is required. Thank you.
