### **SPECIFIC COMMENTS TO AUTHORS**

This is an interesting case report of a rare gastrointestinal tumor describing diagnostic considerations and pitfalls. The aim is educational, as it is with most case reports. The report is well written, the discussion is extensive and conclusive, references are all there. CARE-criteria are met. The authors are to be applauded for that. Abstract, key words and core tip are very short but include necessary information. The observation of the CARE checklist could be added and referenced. The case presentation is very short, but includes the relevant details. The fatal postoperative peritonitis is probably due to anastomotic insufficiency and not to preexisting inflammatory reactions, but that is left open to interpretation. Some more information about the cause of peritonitis could be added, but that would be just "nice to have". Discussion is interesting, detailed, thorough and well readable. No criticism here. The conclusion winds it all up and is consistent with the abstract and the conclusion. The report does not need much revising and could be published straight away, in my opinion.

### **SPECIFIC COMMENTS TO AUTHORS**

This is a case report of a very rare pathology: the case is interesting because it is uncommon. More detailed informations about intraoperative and postoperative course should be added.
