SPECIFIC COMMENTS TO AUTHORS

This is a well-written and comprehensive case report and literature review. English quality is fine. In my opinion, this paper can be accepted.

SPECIFIC COMMENTS TO AUTHORS

In this manuscript Tu K et al. describe a case of nesidioblastosis of the pancreas in an adult patient. The authors consider modern approaches to the diagnosis and treatment of the disease. The manuscript is written clearly and consistently. Clarification of some issues, in my opinion, could further improve the quality of the article. Major revisions 1. The long-term results of surgical treatment (at least for several weeks), including glucose level, episodes of hypoglycemia, and body weight, should be described. 2. In the discussion, it is advisable to compare this case with other descriptions of nesidioblastosis in adults, to highlight the features. Minor revision: Line 12: Please, correct "history" Fig. 3: please, indicate what blood glucose is presented (fasting or random) Fig. 4: please, specify the figure caption by making a detailed description for each of the pictures.

SPECIFIC COMMENTS TO AUTHORS

Unfortunately, the authors made only minor corrections. The main recommendations of the reviewer (specified in major revisions) were ignored. Long-term results of treatment are not described in the manuscript. There are enough descriptions of nonsidioblastosis in adults in the literature to make a comparative analysis with this case and convince that it deserves presentation.
