SPECIFIC COMMENTS TO AUTHORS

ancreatic tuberculosis, as a rare disease, EUS-FNA/FNB is a minimally invasive and practical diagnostic method, combined with ROSE, MOSE, histological and cytological examination. The authors reviewed related studies. My suggestions are as follows: 1. Most of the tissue are white and soft obtained by EUS-FNA/FNB, so “cheesy-looking (caseating)” should be clearly defined, otherwise it would be difficult to distinguish and diagnose. 2. The title mentions "Don't miss the tuberculosis". Is there and study reported EUS-FNA/B diagnosed carcinoma but TB after surgical resection? 3. The expressions of "EUS" and "Final diagnosis" in Table 1 are not consistent, so modification is recommended. 4. Improvement of logical conjunctions and grammar in some paragraphs are needed.

SPECIFIC COMMENTS TO AUTHORS

Very interesting review, this is an important condition we come across in developing countries and to a less extent in developed countries. Infract in developed countries it is often diagnosed as pancreatic cancer, and EUS FNA sometimes clinches the diagnosis. Would like to bring these articles to your attention- Gastrointest Endosc. 2012 Apr;75(4):900-4. doi: 10.1016/j.gie.2011.12.026. Gastrointest Endosc. 2012 May;75(5):1005-10. doi: 10.1016/j.gie.2011.12.032. Epub 2012 Mar 14. I am not suggesting to include these references, but just wanted to bring these to your attention
