SPECIFIC COMMENTS TO AUTHORS

Interesting case report considering the unusual tumor location; however, the authors should underline in the discussion section the role of other imaging techniques to better characterize paragangliomas such as MRI as well as MIBG and somatostatin analogs radionuclide scans; for this purpose, the authors should cite the following papers: 1. Maurea S, Cuocolo A, Imbriaco M, Pellegrino T, Fusari M, Cuocolo R, Liuzzi R, Salvatore M. Imaging characterization of benign and malignant pheochromocytoma or paraganglioma: comparison between MIBG uptake and MR signal intensity ratio.
