## SPECIFIC COMMENTS TO AUTHORS

The authors described an interesting case report of a large esophageal schwannoma which was successfully removed by STER and reviewed the literature. I have the following comments: 1. The last sentence in the introduction "The patient's dysphagia disappeared after the procedure." should be removed. 2. Case presentation a. minor dysphagia should be replaced with mild dysphagia. b. There is no personal and family history as per the journal style. c. I think here, you depend on the histopathological evaluation in reaching the diagnosis, therefore, you can put the final diagnosis after treatment of the case. 3. No tables 1-4. 4. Figure 1: each panel (A-D) needs to be described. Besides, the numbering of the panels should be A-D not as you described (A1-D1), do the same thing for other figures. 5. Figure 3: there is no figure legend. 6. If the figure is 'original', the author needs to add the following copyright information to the bottom right-hand side of the figure in PowerPoint (PPT): Copyright ©The Author(s) 2022. 7. Discussion: a. This sentence "A literature search in the PubMed database identified 40 studies published between 2011 and October 2022," needs to put the references of these cases. 8. References a. The references in the text should follow the journal style. b. I mentioned in the main manuscript file, some sentences need references. 9. The conclusion should be rewritten from the evidence of the case rather than from the literature. 10. Other minor notes need to be revised according to the track changes in the main manuscript file.

#### **SPECIFIC COMMENTS TO AUTHORS**

Dear Author; Congratulations and thanks for submitting the above-mentioned interesting article (case report) for publication to the World Journal of Clinical Cases. I appreciate you and hope your case to be published. Comments: 1. The case is interested. 2. As in the introduction heading, the case is described based on the international literature to some extent, but you added your own patient description as well which is better to move that section to the discussion heading. 3. The keywords are too long, you are better to make them shorter and concise. 4. You provided only 10 references and cited them, but put around 37 references, please synchronize your citations in accordance with your provided references. 5. Remove the sentence of patient consent from the treatment heading, as you brought it under the consent heading as well. 6. The case needs minor language polishing. I hope your case to be published. Regards,

#### **SPECIFIC COMMENTS TO AUTHORS**

Dear Author; Congratulations and thanks for submitting the above-mentioned interesting article (Caser report) for publication to the World Journal of clinical cases. I appreciate you and hope your case to be published. Comments: 1. The case is interested and well written. 2. The author describes that first report of STER for successful removal of an esophageal schwannoma >30 mm. (has you referred to the lasted published articles?), if this is the case, you can revise the manuscript accordingly to make your study more readable. 3. References are not given as written under the its heading (from 11 to 19, from 20 to 32 and the 37) are missing and not cited. 4. Some important parts in the discussion are mentioned, but not cited. 5. Figures and tables are missing. 6. The manuscript needs minor linguistic and grammatical polishing.
