SPECIFIC COMMENTS TO AUTHORS

1. The main complaint and current medical history in the case report are described in a disordered chronological order, such as "two days" first and "four months later" later. 2. In the treatment part of the case report, "After fully understanding the advantages and disadvantages of the two techniques, the patient chose pulp revascularization" (paragraph 5, page 3), the basis for the evaluation of the children's teeth and the advantages and disadvantages of the two treatment options could be specified. 3. The conclusion of Gabriel FN cited in the discussion section of this article (paragraph 2, page 9) may be better moved to the background section. 4. Arrows and other marks can be used in the pictures to point out the lesions or operation sites, which can make the article more readable.
