## SPECIFIC COMMENTS TO AUTHORS

The title of this study, role of in vitamine D in IBS, was interesting, but it contains little new information and does not review or summarize the current issues or new perspectives. In my opinion, although the pathogenesis or pathophysiology of IBS is not clearly established and very difficult to define them, and role of vitamine D is debatable, but more summarized references articles or clinical studies had to be given in the article such as tables. In addition, a lot of minor grammatical errors such as use of capital letters, words spacing after comma, spelling errors may raise preconception, unfortunately.
