SPECIFIC COMMENTS TO AUTHORS

Talipes Equinovarus contracture treated using the Ilizarov technique, provides the benefits of early weight-bearing, and promotes regeneration of soft tissue around the bone, including skin, muscle, and neurovascular structures, based this case, is a good way. And NOT so much people descussed this method in the treatment of Intramuscular Hemangioma. Therefore, this article is valuable and highly innovative, recommended for publication. The selection of indications and intraoperative precautions should be described and discussed. In addition, the follow-up period of 2 years is a little short, and should pay more attention to the observation of complications, especially osteoarthritis. This is a meaningful article. It is recommended that the author read more detailed information of Ilizarov's technology.
