SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of the intervention effect of multi-disciplinary treatment extended nursing model on negative emotions and quality of life of young patients with post-stroke. This study is well designed. The methods are described in detail, and the results are interesting. Minor comments: 1. Some minor language polishing should be revised. 2. The results section in the abstract is too long, please short it. 3. The references should be edited and updated. 4. Please make a short discussion about the limit of the study.

SPECIFIC COMMENTS TO AUTHORS

In this study, the authors included total 60 young stroke patients. The authors found that the multi-disciplinary treatment extended nursing mode can improve the negative emotion of patients and improve their quality of life. Therefore, it can be applied in future clinical practice and is worthy of promotion. Overall, this manuscript is well written. A minor editing is required before final acceptance.
