SPECIFIC COMMENTS TO AUTHORS

Long-term drug use is prone to insomnia, loss of appetite, headache, abdominal pain, or risk of drug dependence, and pharmacological treatment has little effect on children's deficits in social functioning caused by environmental and psychological factors. Among the symptoms of attention deficit hyperactivity disorder, kidney deficiency is more prominent in all types. TCM focuses on the combination of disease and evidence, and coordinates the functions of the internal organs, resulting in significant therapeutic effects. In this study, the authors evaluate the effect of non-pharmacological treatment on the full recovery of social functioning in patients with attention deficit hyperactivity disorder. Overall, this study is well designed and the results are interesting. Comments: 1. The manuscript should be edited according to the journal's guideline. 2. What's the meaning of the red color in the tables? Please check and make a note. 3. How about the limit of the study? Please make a discussion.
