## SPECIFIC COMMENTS TO AUTHORS

In this manuscript, the authors made a case report of metastatic gastric cancer from breast carcinoma presenting with a rheumatic paraneoplastic syndrome. The case was rare and could help us understand the biological, pathological and therapeutic choice for gastric metastasis from breast cancer. Several suggestions are as follows. 1. Please add the information of the molecular subtypes of breast cancer and metastatic gastric cancer, including ER, PR, HER2, Ki67. 2. If the IHC for ER is positive, why not choose endocrine therapy plus CDK4/6 inhibitor? Because the endocrine therapy is the standard therapy for metastatic ER+ breast cancer. 3. Any others sites of metastasis? Visceral or bone metastasis?
