SPECIFIC COMMENTS TO AUTHORS

Dear colleagues, thank you very much for the opportunity to read this interesting paper. It is a very nice summary that includes many points of view of this particular technique. Both anatomical and biomechanical aspects are highlighted. Likewise, the presentation of the clinical results is also absolutely objective and successful. To make the whole paper a bit more descriptive, I personally would wish for a more detailed graphical schematic representation for the ideal entry point and positioning of the CBT screws (page 4). All in all, however, this should not be a real difficulty, so I am pleased to be able to accept this paper for publication. Translated with www.DeepL.com/Translator (free version)
