### SPECIFIC COMMENTS TO AUTHORS

I read with great interest the article entitled "A plant-based diet and its effect on coronary artery disease: a narrative review". Although there are similar publications in the literature including respectable databases such as "uptodate.com", the article is noteworthy because it provides an overview of the attitudes and potential benefits of this diet for CV patients. It is unclear why the authors mention only one disease in their article - 2.7 Atrial fibrillation. I advise either omitting that paragraph or specifying the specifics of the diet for other major CV entities such as arterial hypertension, diabetes, myocardial infarction and stroke, etc. It is necessary to edit the References section according to the detailed instructions of the journal.
