SPECIFIC COMMENTS TO AUTHORS

HPV genotyping was performed in this patient? All giant condiloma acuminatum (CA) are not Buschke-Lowenstein tumor. more information is needed. In this case, only multipl CA are seen. discussion section should be improved. the authors can add the studies below to increase the value of case report. Sarier M, Ceyhan AM, Sepin N, et al. HPV infection in urology practice. Int Urol Nephrol. October 2019;1-8. doi:10.1007/s11255-019-02302-2 Sarier M, Sepin N, Emek M, Konuk EY, Kaplan T, Yuksel BA, Barut Z, Cakcak DS, Hoscan MB. Evaluation of the optimal sampling approach for HPV genotyping in circumcised heterosexual men with genital warts. J Infect Chemother. 2023 May;29(5):475-480. doi: 10.1016/j.jiac.2023.01.017

SPECIFIC COMMENTS TO AUTHORS

Major comments Authors presented a case in which the penile giant condyloma is accompanied with prepuce perforation. The histological study presented in Fig. 3 showed moderate dysplasia as pointed out by the co-authors. However, the inflammation and infection were not investigated, therefore it would be interesting to examine the immune cells penetration in the lesion area compared to that from healthy region. Moreover, the inflammation could be investigated via examining the expression levels of interleukins (ILs). **Minor comments** In Fig. 3, in the microscopic image, scale bar to be added
