SPECIFIC COMMENTS TO AUTHORS

In this paper, the authors present a case of iris metastasis of clear cell renal cell carcinoma many years after the primary tumor was removed surgically in a 62-year old male patient. It is a rare and interesting case. It will add to the existing scanty literature on this topic. However, it can not be accepted in the present form. It needs minor corrections as under: 1. English is uniformly poor. It should be edited by a professional English editing agency and a certificate should be provided. 2. Conclusion of Abstract needs to be rewritten. It should be focused to this case rather than literature review. 3. The use of abbreviations is not standardized. Once abbreviated, full terms are being used again and again, eg. ccRCC. This should be avoided. 4. In case summary, the follow-up is 27 months, whereas in the main report it is mentioned as 9 months. Please reconcile these figures. 5. Figures in text should be in sequential order, eg. Figure 1A, 1B, etc. and should not start with 1B. 6. Figure legends of pathology images need to be improved.
