SPECIFIC COMMENTS TO AUTHORS

General Impression: The authors reported an interesting case of postpartum left ovarian vein thrombosis. The case is informative and uncommon. The figures are clear and representative. However, this manuscript is not publishable in its current form and require careful revision. Comments: 1. The discussion section of the abstract requires reformatting as the sentences are long and hard to follow. Please rephrase it using shorter sentences; it is recommended to keep the phrase length between w5 and 35 words. 2. The keywords are inappropriate. Please write “ovarian venous thrombosis”, “postpartum”, and remove abdominal pain. I would also suggest adding Multi-detector Row Computed Tomography. 3. In the method and result section, could you please clarify whether the patient has concomitant cardiovascular or haematological disease? Had she had previously any thrombotic accident? 4. In the method and result section, did you investigate the levels of protein C, protein S and anti-thrombin III? 5. In the method and result section, did you ask the patient to take Rivaroxaban over the long term as prophylaxis? 6. The written language requires extensive editing and revisions because it has a lot of grammatical and linguistic mistakes. I suggest having the manuscript revised by someone fluent in English or a native English speaker. In addition, please make sure to follow the journal guidelines regarding the manuscript formatting.
