#### **SPECIFIC COMMENTS TO AUTHORS**

This MS is a well-written, potentially interesting case report. Some concerns are arisen which should be addressed adequately. 1. Hemophagocytic lymphohistiocytosis as an initial presentaion of SLE has already been reported. Thus, it is needed to clearly describe what kind of points are novel. 2. It is nice to use a table which summarized previously reptred cases with the same condition. The authors should discuss the similarity and diferrences between prreviously reported cases and this case. 3. Why this patient develop this condition? In-depth soeculation should be represented.

#### **SPECIFIC COMMENTS TO AUTHORS**

Dear authors, Thank you for this interesting case report. I have proposed some changes and had some questions I have added directly to the revised manuscript. However, the most intriguing part for me is that I think that the diagnosis of the patient as having TTP is not clear enough, as well as the genetic testing report. I think these warrant some clarification.
