SPECIFIC COMMENTS TO AUTHORS

Continuous nursing is a new type of nursing model, which covers nursing services from hospital to family or society based on holistic nursing theory and humanistic nursing theory. It ensures the nursing quality of patients after discharge and improves the long-term prognosis of patients as well as their life quality. In this study, the authors investigated the effect of continuous nursing combined with respiratory exercise nursing on the pulmonary function of postoperative patients with lung cancer. This study is overall well designed. The study is performed well, and the results are very interesting. The reviewer recommends to accept this manuscript after a minor editing.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study. The authors found that continuous nursing combined with respiratory exercise nursing can significantly accelerate the recovery of respiratory function in postoperative lung cancer patients. The manuscript is very well written. Only some minor language polishing should be corrected.
