SPECIFIC COMMENTS TO AUTHORS

The authors have provided a systematic review on "a rare case with four kinds of antibody positive paraneoplastic limbic encephalitis". The following comments are Providing a Table by presenting the involved antibodies, the suggested: 1time, and the location of the central nervous system. 2-Emphasizing on the early detection. 3-Providing a brief methodology of the tests. 4-Providing complementary pedigree information in this regard. 5-Considering all the environmental factors, including nutrition. Furthermore, the final comment will unmask the severity and heterogenic pattern of the related antibodies by application of protein expression of the target antibodies in the Circulating Neural Cells, at single cell level, as early as possible, by observation of the initial symptom. _Circulating Neural cells are assayable in 2 -3 ml of the peripheral blood.

SPECIFIC COMMENTS TO AUTHORS

Thank you for providing this interesting manuscript. Here are my comments on this draft: -The case description is accurate, with enough details, and specific conclusions. Would be useful if authors could also discuss the evidence around using gamma globulins and high dose stroids in autoimmune paraneoplastic encephalitis. -Some of the language requires polishing as authors included terms without correspondence in English (e.g. 'advanced intelligent', 'reflex symmetry of the quadriplegic tendon', 'meninges stimulation'). -Would be useful to add arrows on images to underlie the main abnormalities.
