SPECIFIC COMMENTS TO AUTHORS

1. Please explain why the authors think these 2 cases were similar to clinical findings of Toxoplasmosis? Was the patient received any serum test of Toxo-IgM? Or the patient had any histories which were related to Toxoplasmosis? 2. Please describe more about surgical or treatment choice for CHRRPE. When do patients need to receive vitrectomy? Are there reports about this information? 3. I think the references were too out of date. Please add the following references: (1) Combined Hamartoma of the Retina and Retinal Pigment Epithelium: An Optical Coherence Tomography-Based Reappraisal.
